

SMW LNB 14 GHz

14 GHz Low Noise Converter

SMW's 14 GHz LNB is mainly used for monitoring transmitted signals from uplink stations and links working in the frequency range 14.0 - 14.5 GHz (extended frequency range see specification).

The converter comes standard with 0 or 45 dB gain, F- or N-connector and a two-year warranty.

All our LNBs are individually hand tuned to get the very best performance available for each unit. Quality and long term reliability is also essential. Therefore are all LNBs tested according to a very extensive test program, which includes heating, cooling, water-proof testing and rigorous electrical testing.

Swedish Microwave was founded 1986 and, within Europe, is the oldest manufacturer of LNBs. In the standard product range we have DRO-LNBs, PLL-LNBs, LNAs, Block Downconverters (BDC), Up- & Down Converters, Quattro LNBs, Twin LNBs, Ortho mode transducers (OMT), Line Amplifiers and Feed horns.

Swedish Microwave is today one of the leading manufacturers of microwave components needed for satellite receiving equipment and other industrial products.
